Education and Certifications

The University of Texas – Dallas

MS in Computer Engineering – Applied Machine Learning, GPA: 3.7

May 2025

BS in Computer Engineering, GPA: 3.7

May 2024

Certifications

AWS Cloud Practitioner

September 2023

Skills

Languages: C#, SQL, Java, Typescript/Javascript, HTML/CSS, Python, C + +, GoLang

Frameworks/Libraries: ASP.NET Core, React, React Native, Node.js, Express.js, Angular, Ionic, Django

Tools: Git, AWS, Azure DevOps, Docker, PostgreSQL, JIRA, GraphQL, NoSQL, Kubernetes, MongoDB

Experience

Technology Consultant Intern, Credera – Addison, TX

June 2024 – August 2024

- Rebuilt account settings page, serving 1M+ users on Raising Cane's mobile/web app with Ionic Angular
- Increased MFA usage by 60% by creating the UI and GraphQL mutations/queries for advanced auth flows
- Migrated 50% of frontend HTTP calls to GraphQL by developing a dedicated service for new requests
- Ensured product quality with 100% component coverage through the implementation of Jest unit tests
- Led 4 live client demos to facilitate client alignment and ensure smooth product delivery

Software Engineer Intern, Rhapsody Health – Frisco, TX

May 2023 – August 2023

- Reduced product update downtime for 1,700+ healthcare clients using a C# REST API in ASP.NET Core
- Achieved 100% code coverage by automating testing and deployment with a YAML pipeline in Azure DevOps CI/CD, running NUnit tests via bash and PowerShell scripts
- Eliminated 100% of manual cloud setup with IaC using CloudFormation stacks written in AWS CDK
- Streamlined 10+ client code integrations via OpenAPI, published as NuGet packages on Azure Artifacts
- Built a service for quick access to 50+ secure API keys using Secrets Manager and SSM with AWS SDK

Full-Stack Developer, Hidden Gems – Richardson, TX

August 2022 – March 2024

- Collaborated with 3 clients to develop a catering mobile app using Typescript, React Native, and Redux
- Delivered solutions for 50+ users to create, search, and schedule catering services in an agile setting
- Leveraged Amplify and AppSync GraphQL APIs for CRUD operations on NoSQL DynamoDB tables
- Reduced downtime by 50% with a backend Lambda-based API by parallelizing GCP distance API calls
- Accelerated image retrieval by 30% using keys linked to images in S3 with CloudFront caching

Projects

Research RAG LLM, Sponsored by Professor Tamil

qoltbot.netlify.app

- Developed and deployed a React app where users upload research and interact with a RAG chatbot
- Managed 100+ knowledge bases with PostgreSQL schemas and CRUD database APIs on AWS RDS
- Reduced 90% of cloud infrastructure costs using Docker containers executed on AWS Lambda via ECS
- Decreased latency by 20% for voice interactions using WebSockets, SQS, EventBridge, and Transcribe

Motherboard Identifier, UDesign Expo 1st place

tinyurl.com/motherboard-inspector

- Developed Python computer vision software to automate identification of faulty motherboards
- Increased system accuracy by 20% by implementing OCR algorithms using OpenCV and Tesseract
